

# Card Game Introduction

In our interview question, we will be dealing with a game involving playing cards.

## Card

- A card has two properties: a rank and a suit.
- A card's rank is an ordered value. There are 13 ranks. From lowest to highest, a rank can be one of the values: { A, 2, 3, 4, 5, 6, 7, 8, 9, 10, J, Q, K, JOKER }
- A card's suit is an unordered value. A suit can be one of { ♣, ♦, ♥, ♠ }. These are spoken as "clubs", "diamonds", "hearts", and "spades". Jokers do not have suits.
- A card is defined as a rank and a suit. We display them as rank + suit, for example, 2♥, 10♦, Q♠, etc.
